Dear Profesor Sternheimer,

We are a company in Holland developing new strains of Tomato plants. At the moment our greenhouse is infected by Potato virus X (information over is enclosed, also over Tobacco mosaic virus. So you can see the difference. From information we have received via the internet

We understand that you have done research, with your protien music on growth and T.M.V. Would your treatment work on Potato virus X. and if so would it be possible to obtain the nessersary tapes from you. We would all so if possible like to have more information over the music, are the results achieved by cretain frequencys, or by the resonance ect. Any assistance you might be able to give would be greatly appreciated

Yours Sincerely.

Dear Professor Sternheimer,

Some time has passed since we spoke on the telephone, regarding your experiments
On the treatment of virus's in Tomato plants with music. We were wondering whether
You have had any success in creating the right music for potato x virus. And of course
We are also interested in the growth music.
If it is any easier for you it is possible to send the music in files attached to an E-mail
As we have a C.D. writer on our computer.
Either way we hope that we hear from you soon.

Yours Sincerely

L. VERMEER

Dear Sir:

Please find enclosed the cassette you requested:

Side A • Inhibition of Potato Virus X
RNA-directed polymerase (30")
• Inhibition of Potato Virus X
Coat Protein (30") } x3

Side B • Six tracks extensions (1'20") for growth
• Thaumatin (1'15") for defences and taste
• Cytochrome C (29") for general metabolism

Side B would probably be done to be played once a day in the morning. Side A, depending upon the severity of the infection, may be played several times (maybe 3 or 4 times a day at regular intervals) until the infection is resolved.

Please beware that nobody is around when these are being played; sound level should be as for people listening to radio.

Please keep me informed!

JSM

P.S. Do not hesitate to call if you have questions.
